The Ab also inhibits TNF-alpha induced expression of endothelial cell leukocyte adhesion molecule-1 (ELAM-1) on human umbilical vein scarcing a para cell (HUVEC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Allen DJ, Hoogenboom HRJM, Kaymakcalan Z, Labkovsky B, Mankovich JA, McGuiness BT, Roberts AJ, Sakorafas P, Salfeld JG, Schoenhaut D, Vaughan TJ, White M, Wilton AJ; WPI; 97-415302/38.

High affinity antibodies against human TNF alpha - useful 1 High activity e.g. to treat autoimmune diseases and claim 20; page 70; 102pp; English.

The present sequence is a novel anti-human tumour necrosis. The present sequence is a novel anti-human tumour necrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Anti-TNF-alpha antibody light chain CDR3.

The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro L929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            less and has a Koff rate constant of Ix10 power -3 s power -1 or class (both determined by surface plasmon resonance), and reutralises human TNR-alpha cytotoxicity in a standard in vitro 1929 assay with an IC50 of Ix10 power -7 M or less. The Ab, which inhibits TNR-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diseases, autoimmune uveitis or nephrotic syndrome, infectious diseases, successing the control of the control of the cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, alcoholic, viral or fulminant hepatitis, coagulation disturbances, pyrexia, periodontal disease, obesity and radiation toxicity. The balso inhibits TNF-alpha induced expression of endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

If WPI 97-415302/38.

If High affinity antibodies against human TNF alpha - useful to inhibit TNF alpha activity, e.g. to treat autoimmune diseases and cancer SC Claim 20; page 72; 102pp; English.

CC The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) light chain complementarity CC determining region 3 (CDR3).

CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or CC less and has a Koff rate constant of 1x10 power -3 s power -1 or CC less (both determined by surface plasmon resonance), and CC less (both determined by surface plasmon resonance), and CC less (both determined by surface plasmon resonance), and CC constaltes human TNF-alpha cytotoxicity in a standard in vitro CC L929 assay with an ICSO of 1x10 power -7 M or less. The Ab, which CC inhibits TNF-alpha activity, rheumatoid arthritis, rheumatoid atthritis, rheumatoid atthritis, rheumatoid atthritis, rheumatoid here.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 88888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Š

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro L929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, youty arthritis, allergy, multiple sclerosis, autoimmune diseases, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone recorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, oversity a nervicional disease observe and reductive means of the control of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                  PT High affinity e.g. to treat autoimmune diseases and cancer PS Claim 20; Page 68; 102pp; English.

CC The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) light chain complementarity determining region 3 (CDR3).

CC determining region 3 (CDR3).

CC determining region 3 (CDR3).

CC less and has a Koff rate constant of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and curvalises human TNF-alpha cytotoxicity in a standard in vitro less (both determined by surface plasmon resonance), and curvalises human TNF-alpha cytotoxicity in a standard in vitro less and has a Koff rate constant of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha cytotoxicity in a standard in vitro autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, cardiac or inflammatory bone disorders, bone resorption disease, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The hab also inhibits TNF-alpha induced expression of endothelial celliculus of the province adherica modern and province adherication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

Human proteasome HC2 and its gene can be used in the investigation diagnosis, and treatment of diseases associated with proteasome abnormality such as cancers and Alzheimers disease.
Human proteasome is purified from the soluble liver fractions of human liver cell HepG2 cell. A probe was prepared, and a cDNA library constructed using plasmid Bluescript KS+. A clone was isolated and its DNA sequenced to give Q23894.

                                                                                                                                                            prosomal cell surface proteins
Claim 13; Fig 9; 34pp; English.
The 269 amino acid sequence is used to raise antibodies against the prosomal surface protein p33K. The anti-p33K antibodies raised against this protein can detect prosomal surface antigens. HIV infected cells express these proteins on their surface, thus the antibodies may be used to detect HIV infection and to determine whether T4 cells have been infected even before they are killed by HIV.

PT High affinity antibodies against human TNF alpha - useful to inhibit
TNF alpha activity, e.g. to treat autoimmune diseases and cancer
Claim 20; Page 69; 102pp; English.

CT he present sequence is a novel anti-human tumour necrosis
CC factor-alpha (TNF-alpha) antibody (Ab) light chain complementarity
CC determining region 3 (CDR3).

CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or
CC less (both determined by surface plasmon resonance), and
CC neutralises human TNF-alpha cytotoxicity in a standard in vitro
CC 1292 assay with an IC50 of 1x10 power -7 M or less. The Ab, which
CC inhibits TNF-alpha activity, can be used to treat sepsis,
CC autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid
CC syndrome, infectious diseases, malignancy, pulmonary, intestinal,
CC cardiac or inflammatory bone disorders, bone resorption disease,
CC alcoholic, viral or fulminant hepatitis, coagulation disturbances,
CC pyrexia, periodontal disease, obesity and radiation toxicity. The
CC ab also inhibits TNF-alpha induced expression of endothelial cell
CC cendothelial cells (HUVEC).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a novel anti-human tumour necrosis
factor-alpha (TNF-alpha) antibody (Ab) light chain complementarity
determining region 3 (CDR3).

The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or
less and has a Koff rate constant of 1x10 power -3 s power -1 or
less (both determined by surface plasmon resonance), and
neutralises human TNF-alpha cytotoxicity in a standard in vitro
less (both determined by surface plasmon resonance), and
neutralises human TNF-alpha cytotoxicity in a standard in vitro
less (both determined by surface plasmon resonance), and
thibits TNF-alpha activity, can be used to treat sepsis,
autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid
spondylitis, osteoarthritis, gouty arthritis, rhematoid
spondylitis, osteoarthritis, gouty arthritis, allergy, multiple
sclerosis, autoimmune diseases, malignancy pulmonary, intestinal,
cardiac or inflammatory bone disorders, bone resorption disease,
alcoholic, viral or fulminant hepatitis, coagulation discurbances,
burns, reperfusion injury, keloid formation, scar tissue formation,
pyrexia, periodontal disease, obesity and radiation toxicity. The
lawkowth adhesion molocular (ELL) and the molocular (ELL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                          14-AUG-1997

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro 1929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple collections, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, calcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The Ab also inhibits TNF-alpha induced expression of endothelial cell leukocyte adhesion molecule-1 (ELAM-1) on human umbilical vein conditions and an administration of an Ar.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CE factor-alpha activity, e.g. to treat autoimmune diseases and cancer PS Claim 9; Page 65; 102pp; English.

CC factor-alpha (TWF-alpha) antibody (Ab) heavy chain complementarity CC factor-alpha (TWF-alpha) antibody (Ab) heavy chain complementarity CC determining region 3 (CDR3).

CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or CC less (both determined by surface plasmon resonance), and cutralises human TNF-alpha cytotoxicity in a standard in vitro CC 1293 assay with an IC50 of 1x10 power -7 M or less. The Ab, which CC inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, rheumatoid considerous, infectious diseases, malignancy, pulmonary, intestinal, CC syndrome, infectious diseases, malignancy, pulmonary, intestinal, CC cardiac or inflammatory bone disorders, bone resorption disease, CC alcoholic, viral or fulminant hepatitis, coagulation toxicity. The CD burns, reperfusion injury, kaloid formation, scar tissue formation discusses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                              High affinity antibodies against human TNF alpha - useful to inhibit TNF alpha activity, e.g. to treat autoimmune diseases and cancer Claim 16; Page 76; 102pp; English.

Claim 16; Page 76; 102pp; English.

The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain variable region. The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less and has a Koff rate constant of 1x10 power -3 s nod neutralises human TNF-alpha cytotoxicity in a standard in vitro L929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which is alsay with an IC50 of 1x10 power -7 M or less. The Ab, which cautoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple syndrome, infectious diseases, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disease, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The laukerte adhesion molecules, formation, scar tissue formation, allowed expression of endothelial cell

The present sequence is a novel anti-human tumour necrosis
Claim 20; Page 73; 102pp; English.

The present sequence is a novel anti-human tumour necrosis
factor alpha (TNF-alpha) antibody (Ab) heavy chain complementarity
Cdetermining region 3 (CDR3).

The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or
Less and has a Koff rate constant of 1x10 power -3 s power -1 or
less and has a Koff rate constant of 1x10 power -3 not
less tobth determined by surface plasmon resonance), and
neutralises human TNF-alpha cytotoxicity in a standard in vitro
1929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which
constant activity, can be used to treat sepsis,
autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid
spondylitis, osteoarthritis, gouty arthritis, rheumatoid
spondylitis, osteoarthritis, saltergy, multiple
scolerosis, autoimmune disbetes, autoimmune uveitis or nephrotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ននននននន
                                                                    The present sequence is a novel anti-human tumour necrosis
factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity
determining region 3 (CDR3).
The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or
less and has a Koff rate constant of 1x10 power -3 s power -1 or
less (both determined by surface plasmon resonance), and
neutralises human TNF-alpha cytotoxicity in a standard in vitro
less (both determined by surface plasmon resonance), and
neutralises human TNF-alpha cytotoxicity in a standard in vitro
constant is a standard in vitro
constant in vitro

The DNA sequence was isolated from a library of clones of S. aureus WCUU 29 in Escherichia coli. The DNA sequence can be used in the construction of ribozymes and antisense sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The present protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect a host against invasion by S. aureus, and conditions relating to staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               aureus infection

The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple celerosis, autoimmune diabetes, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The Ab also inhibits TNF-alpha induced expression of endothelial cell cleukocyte adhesion molecule-1 (ELAM-1) on human umbilical vein companies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The Ab also inhibits TNF-alpha induced expression of endothelial cell leukocyte adhesion molecule-1 (EIAM-1) on human umbilical vein condothelial cells (HUVEC).
                                                                                                            factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity determining region 3 (CDR3).

The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro L929 assay with an ICSO of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                         (BADI ) BASF AG.

Inhibitors can be used e.g. to inhibit HIV TAT-mediated transcription in the treatment of HIV infection. Stimulators can be used e.g. to activate tumour suppressor p53 in the treatment of cancer or to activate the muscle differentiation factor MyoD to promote muscle differentiation. The products can also be used to inhibit the cell cycle progression inducing effect of an oncoprotein which binds p300/CBB in a subject. The C-terminal fragment is specific for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated p300/CBP-associated factor, P/CAF - used to develop products for modulating transcription, e.g. for treating HIV infection or cancers or for promoting muscle differentiation Claim 2; Page 72-73; 107pp; English.

This polypeptide comprises the C-terminal region (amino acid residues 352-832) of a novel human p300/CBP associated cofactor, P/CAF (see W40052), that modulates transcription through binding to the cell transcription cofactors p300 (see W40055) and CBP (see W40050) and through acetylation of histones. This C-terminal region contains the histone acetyltransferase activity of the protein. The invention provides methods of screening for compounds that inhibit or efficients the histone acetyltransferase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human P300/CBP-associated transcriptional cofactor P/CAF. P/CAF; human; p300; CBP; transcription; cofactor; histone acetyltransferase; HIV; infection; cancer; therapy.

                                                                                                                                                                                                                                                                                       designated P/CAF, that modulates transcription through binding to the cell transcription cofactors p300 (see W40055) and CBP (see W40060) and through acetylation of histones. Its amino acid sequence was deduced from a clone (see V10090) obtained from a clone (see V10090) obtained from a clone (see W40055) and CBP (see W40056) of P/CAF, which contains the binding site for p300/CBP. C and the C-terminal region (see W40054), which contains the histone acetyltransferase activity are also claimed. The invention provides methods of screening for compounds that inhibit or stimulate the C transcription modulating and histone acetyltransferase activity of P/CAF and p300/CBP. Inhibitors can be used e.g. to inhibit HIV TAT-mediated transcription in the treatment of HIV infection. Stimulators can be used e.g. to activate them uscle differentiation factor MyoD to promote muscle differentiation. The products can also be used to inhibit the cell cycle progression inducing effect can also be used for detection, screening assays and production of
                                                                                                                                                                      Query Match

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                 The present sequence is a novel anti-human tumour necrosis
factor-alpha (TWP-alpha) antibody (Ab) heavy chain complementarity
determining region 3 (CDR3).

The Ab dissociates from TWF-alpha with a Kd of 1x10 power -8 M or
less and has a Koff rate constant of 1x10 power -3 s power -1 or
less (both determined by surface plasmon resonance), and
neutralises human TWF-alpha cytotoxicity in a standard in vitro
neutralises human TWF-alpha cytotoxicity in a standard in vitro
1929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which
inhibits TWF-alpha activity, can be used to treat sepsis,
autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid
spondylitis, osteoarthritis, gouty arthritis, allergy, multiple
sclerosis, autoimmune diseases, malignancy, pulmonary, intestinal,
cardiac or inflammatory bone disorders, bone resorption disease,
alcoholic, viral or fulminant hepatitis, coagulation disturbances,
burns, reperfusion injury, keloid formation, scar tissue formation,
pyrexia, periodontal disease, obesity and radiation toxicity. The
Ab also inhibits TWF-alpha induced expression of endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

High affinity antibodies against human TNF alpha - useful to inhibit TNF alpha activity, e.g. to treat autoimmune diseases and cancer CC laim 20; Page 74; 102pp; English.

CC The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity CC determining region 3 (CDR3).

CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or CC less and has a Koff rate constant of 1x10 power -3 s power -1 or CC less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro CC 1292 assay with an IC50 of 1x10 power -7 M or less. The Ab, which CC inhibits TNF-alpha activity, can be used to treat sepsis, CC autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple CC syndrome, infectious diseases, malignancy, pulmonary, intestinal, CC cardiac or inflammatory bone disorders, bone resorption disease, CC syndrome, infectious disease, autoimmune uveitis or nephrotic CC syndrome, infectious disease, malignancy, pulmonary, intestinal, CC cardiac or inflammatory bune disorders, bone resorption disease, CC burns, reperfusion injury, keloid formation, scar tissue formation, CC about a periodontal disease, obesity and radiation toxicity. The CC andothelial cells (HUMPE)

The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain variable region. The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro 1292 assay with an IC50 of 1x10 power -7 M or less. The Ab, which is TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diseases, maignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The heal also inhibits TNF-alpha induced expression of endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
Claim 20; Page /4; IVAFF, The present sequence is a novel anti-hu factor-alpha (TNF-alpha) antibody (Ab)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (BADI ) BASE AG.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro 1929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diseases, malignancy pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The Ab also inhibits TNF-alpha induced expression of endothelial cell leukocyte adhesion molecule-1 (ELAM-1) on human umbilical vein
                                                                                                                                     High affinity antibodies against human TNF alpha - useful to inhibit TNF alpha activity, e.g. to treat autoimmune diseases and cancer SC claim 20; Page 72; 102pp; English.

CT The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity determining region 3 (CDR3).

CT The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less and has a Koff rate constant of 1x10 power -7 and neutralises human TNF-alpha cytotoxicity in a standard in vitro 1292 assay with an IC50 of 1x10 power -7 M or less. The Ab, which cinhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                    CT The present sequence is a novel anti-human tumour necrosis CC factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity CC determining region 3 (CDR3).

CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or CC less and has a Koff rate constant of 1x10 power -3 s power -1 or CC neutralises human TNF-alpha cytotoxicity in a standard in vitro CC L929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which CC inhibits TNF-alpha activity, can be used to treat sepsis, CC autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, rheumatoid compondylitis, osteoarthritis, gouty arthritis, rheumatoid conjuities, autoimmune diabetes, autoimmune uveitis or nephrotic CC syndrome, infectious diseases, malignancy, pulmonary, intestinal, CC cardiac or inflammatory bone disorders, bone resorption disease, CC alcoholic, viral or fulminant hepatitis, coagulation disturbances, CC pyrexia, periodontal disease, obesity and radiation toxicity. The CC burns, reperfusion injury, keloid formation, scar tissue formation, CC pyrexia, periodontal disease, obesity and radiation toxicity. The CC ab also inhibits TNF-alpha induced expression of endothelial cell CC endothelial cells (HUVEC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The Ab dissociates from TNF-alpha with a Kd of Ix10 power -8 M or less and has a Koff rate constant of Ix10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro L929 assay with an IC50 of Ix10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, burns, reperfusion injury, keloid formation, coagulation disturbances, burns, reperfusion injury, keloid formation, car tissue formation, over the content of the content of the coagulation disturbances.

High affinity antibodies against human TNF alpha - useful t TNF alpha activity, e.g. to treat autoimmune diseases and c Claim 20; Page 73; 102pp; English.

The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) autibody (Ab) heavy chain complements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pyrexia, periodontal disease, obesity and radiation toxicity. The Ab also inhibits TNF-alpha induced expression of endothelial cell leukocyte adhesion molecule-1 (ELAM-1) on human umbilical vein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Allen DJ, Hoogenboom HRJM, Kaymakcalan Z, Labkovsky

Thigh affinity antibodies against human TNF alpha - useful to inhibity the second of the present sequence is a novel anti-human tumour necrosist factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity determining region 3 (CDR3).

C The present sequence is a novel anti-human tumour necrosist factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity determining region 3 (CDR3).

C The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and courtailses human TNF-alpha cytotoxicity in a standard in vitro 1929 assay with an ICSO of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimpuse diseases of the constant of the constant sepsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                             DNA encoding succinate-ubiquinone reductase membrane anchor subunit - useful for producing recombinant polypeptide Claim 1; Fig IA-B; 25pp; English.

The present sequence represents a human succinate-ubiquinone reductase membrane anchor subunit (SDHMA). The SDHMA nucleic acid sequence was first identified in Incyte clone 2454416 from the aortic endothelial cell cDNA library. The protein has chemical and structural homology with membrane anchoring subunits from bovine mitochondria, QPS3 and QPS1. The protein also contains potential intramolecular disulphide bridging sites, which are found at Cys11, Cys44, Cys88 and Cys150. SDHMA can be used to treat myopathies, e.g. progressive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obbesity and radiation toxicity. The halso inhibits TNF-alpha induced expression of endothelial cell leukoyyte adhesion molecule-1 (ELAM-1) on human umbilical vein

                                                                                                                                                                                                                                                                                                                                                                              PT helicobacter pylori nucleic acid sequences and encoded princection and for diagnosis of H. pylori infection PS Claim 14; Page 502; 1145pp; English.

CC This sequence is a H. pylori protein of unspecified function. PS Claim 14; Page 502; 1145pp; English.

CC The protein may be used in a vaccine to prevent or treat H. pylori PS Claim 14; Page 502; 1145pp; English.

CC Unfection or to identify H. pylori polypeptide binding compounds, in the protein may be used in a vaccine to prevent or inhibitors. The CC useful as potential H. pylori life cycle activators or inhibitors. The CC Unit of the protein of the pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and CC can be used to prevent the translation of H. pylori mRNA. Antibodies against the protein can be used in immunoassays to evaluate the abundance and distribution of H. pylori-specific antigens. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions confided for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR compliant for recombinant polymentide production.

PT Helicobacter pylori nucleic acid sequences and encoded PT polypeptide(s) - useful in vaccines to treat or prevent H. pylori infection and for diagnosis of H. pylori infection PT infection and for diagnosis of H. pylori infection PT infection and for diagnosis of H. pylori infection PS Claims 14,80; Page 679; 1145pp; English.

CC This sequence is a H. pylori cell envelope inner membrane protein CC involved in cofactor metabolism.

CC The protein may be used in a vaccine to prevent or treat H. pylori CC infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The DNA and probes derived from it may be used for the identification of H. pylori in a sample and the diagnosis of H. pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and complementary to the DNA act as antisense sequences and the used to prevent the translation of H. pylori mRNA. Antibodies and distribution of H. pylori-specific antigens. The genomic sequence of the pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for significant homology to other known or exported computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted coding regions of interest, particular regions can be isolated from H. pylori by PCR complements. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR complements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ş

                                                                                                                                                                                                                                                                                                                          CC involved in cofactor metabolism.

CC The protein may be used in a vaccine to prevent or treat H. pylori compounds, in the protein or to identify H. pylori polypeptide binding compounds, compounds of the protein or to identify H. pylori polypeptide binding compounds, compounds of useful as potential H. pylori life cycle activators or inhibitors. The CC useful as potential H. pylori life cycle activators or inhibitors. The CC DNA and probes derived from it may be used for the identification of CC H. pylori in a sample and the diagnosis of H. pylori infection. Nucleic cacid sequences complementary to the DNA act as antisense sequences and CC can be used to prevent the translation of H. pylori mRNA. Antibodies CC against the protein can be used in immunoassays to evaluate the abundance and istribution of H. pylori-specific antigens. The genomic sequence of CC H. pylori (ATCC 55679) was determined from overlapping contigs generated CC pylori (ATCC 55679) was determined from overlapping contigs generated CC mechanically shearing the bacterial DNA. The sequences were analysed for act least 180 nucleotides, and the predicted coding regions CC defined by computer evaluation. To identify likely H. pylori antigens for Vaccine development, the amino acid sequences predicted from various ORF combrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR camplification for recombinant polypeptide production, e.g. in E. coli nearly contact the protect of the coling the production of the pro

MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

n on: Thu Sep 2 12:31:04 1999; MasPar time 3.15 Seconds 152.820 Million cell updates/sec

bular output not generated.

Description: Perfect Score: Title: >US-08-599-226-29 (1-12) from USO8599226.pep 75 1 ASYLSTSSSLDY 12

Sequence:

Scoring table: PAM 150 Gap 15

Searched: 122810 seqs, 40068593 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: pir60 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 24.557; Variance 30.670; scale 0.801

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
